Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments are not convincing. The Examiner has reviewed the record and believes the rejection of claims 1-15 to be proper.

The Applicant contends that the combination of Ayanoglu et al. in view of Stallings is improper because there would be very little expectation of success in using the sliding window technique in a wireless network, such as that shown in Ayanoglu et al., since Stallings states that this technique "would not work well in an unreliable network," such as a wireless network.

The Examiner respectfully disagrees. In order to establish a prima facie case of obviousness, there must be a reasonable expectation of success. Stalling states that the sliding window technique "would not work well in an unreliable network". Stalling thus teaches that there is a reasonable expectation of success since he states that utilizing the sliding window technique in a unreliable network, such as a wireless network, would work. It just would not work well. Accordingly, the examiner maintains that the combination of of Ayanoglu et al. in view of Stallings is proper.
